

How to Make Audio Sound Better on Zoom

We strongly suggest for you to use zoom on a desktop rather than a tablet or phone if possible.

Step 1:

Make sure you're listening through headphones or a speaker and not through your external speakers

Step 2:

Click the up arrow next to the Microphone Icon in the bottom left of the screen and select "Audio Settings..."

Step 3:

Within that window, click "Advanced" at the bottom-right of the screen

Step 4:

Set "Suppress Persistent Background Noise" to "Disable"
Set "Suppress Intermittent Background Noise" to "Disable"
Make sure there's a blue checkmark in the "Show in-meeting option to 'Enable Original Sound' from microphone" box

Step 5:

Come back to the meeting screen where you can see your webcam and make sure that the "Turn Original Sound Off" bar is blue

Every computer is different, so you may have to tweak your built-in mic. Specifically, you may need to turn off sound enhancements for your microphone on Windows.
